Abstract

This study presents a checklist of powdery mildew fungi (*Erysiphales*) of Turkey together with their known host plants. The checklist enumerates 143 species of *Erysiphales* belonging to 14 teleomorphic and anamorphic genera and it includes 674 host plants species from 322 genera and 72 families.

Key words: fungal diversity, microfungi, powdery mildews, Turkey

----- * -----

Türkiye'nin Külleme mantarları (*Erysiphales*) kontrol listesi

Özet

Bu çalışma bilenen konakçı bitkileri ile birlikte Türkiye'nin külleme mantarlarının (*Erysiphales*) kontrol listesini içermektedir. Kontrol listesinde 14 teliomorf ve anamorf cinse ait 143 tür *Erysiphales* sıralanmıştır ve 72 familya 322 cins ve 674 konakçı bitki türünü içermektedir.

Anahtar kelimeler: mantar çeşitliliği, mikrofunguslar, külleme mantarları, Türkiye

1. Introduction

Erysiphales (powdery mildews) in *Leotiomycetes* (Ascomycota) are represented by 1 family (*Erysiphaceae*), 16 genera and 873 species (Braun and Cook, 2012). These fungi are widely distributed all over the world and cause diseases on numerous wild and cultivated plants parasitising ca. 10 000 species of Angiosperms only. As a group, powdery mildews are noted for their virulence, causing great losses to crops on a worldwide basis, as well as for their host specificity. The distribution of the *Erysiphales* is cosmopolitan, reaching from tropics to the polar areas. The main geographical regions of the distribution are in the temperate zone of the northern hemisphere (Braun, 1987). So Turkey is in the main distribution area.

The taxonomy of powdery mildew fungi recently underwent extensive revision based on DNA sequence data. Previously, identification was based mainly on the teleomorph (sexual stage) and the morphology of the chasmothecium and chasmothecial appendages. Recently, the classical morphological criteria were supplemented with both scanning electron microscope (SEM) studies of conidial surfaces (Cook et al., 1997) and molecular phylogenetic analyses of nucleotide sequences of the nuclear ribosomal DNA (rDNA) region (primarily due to the numerous papers by Takamatsu with coauthors, e.g.: Takamatsu et al., 1999, 2005a, b; Braun and Takamatsu, 2000; Hirata et al., 2000; Mori et al., 2000a, b; Braun et al., 2001; Takamatsu, 2004; Khodaparast et al., 2012, etc.).

Turkey is a large peninsula situated between south-eastern Europe and Asia and its land surface is about 780,000 km². The country comprises different phytogeographic regions, the Euro-Siberian, Irano-Turanian and the Mediterranean region. Having a number of natural habitats, ranging from Mediterranean, Aegean and Black Sea coasts to towering coastal and interior mountains, from deeply incised valleys to expansive steppes, from fertile alluvial plains

to arid, rocky hill slopes, Turkey really deserves much more attention. Many floristic studies have shown that Turkey has a rich diversity of species and is an active species-formation center and it is one of the world's most important countries in terms of endemic plants. Due to its topographical and climatic diversity the flora is rich and counts approximately 10.000 vascular plant species. Flora records reveal that there are more than 3000 endemic plants in Turkey, which constitutes 34% of total flora (Güner et al., 2012).

Research studies related to the fungi on the plants began with Magnus, Bornmuller and Bremer in the 1892s–1940s (Magnus, 1899; Bremer et al., 1947). These studies were followed by studies of Göbelez and Karel (Gobelez, 1952; Karel, 1958).

Studies on powdery mildews have been increased in Turkey between the years 1960-1990 (Karaca, 1961; Gobelez, 1962; Oran, 1967; Selik, 1973; Öner and Ekmekçi, 1974; Öner et al., 1974; Baydar, 1975; Uçar and Öner, 1977; Tamer and Öner, 1978; Karaboz and Öner, 1982; Tamer et al., 1987, 1989). Karaca (1961) made first checklist of powdery mildews in Turkey. In these study, there are 32 species of *Erysiphales* on 110 plants determined.

During the the years 1990-2005 many fungal specimens have been collected in Turkey. Some of them belong to the *Erysiphales*. However, powdery mildews have never been extensively studied in Turkey and information on the species and their host plants is scattered in various plant pathological reports and some general fungal lists (Tamer et al., 1990a, 1990b, 1992; 1997; Güven and Tamer, 1993; Bahçecioğlu and Işıloğlu, 1995; Bahçecioğlu and Yıldız, 1996, 2001, 2005; Karakaya, 1998a, 1998b, 1998c; Huseyin and Selçuk, 2000; Kurt and Soylu, 2001; Kurt et al., 2004; Sert et al., 2004).

In the last decade, studies on fungi have greatly increased in Turkey. A large number of new records of powdery mildews have been added (Bahçecioğlu et al., 2006; Kabaktepe and Bahçecioğlu, 2006; Sert et al., 2006; Kavak, 2007, 2011; Bahçecioğlu and Kabaktepe, 2009; Huseyin et al., 2009; Kirbağ and Kurşad, 2011; Severoğlu and Özyiğit, 2012). Bahçecioğlu et al. (2006) published a new species on *Rubia tinctorum* L. (*Neoerysiphe rubiae* Bahç., U. Braun & Kabakt.) in country.

There were a total of 143 species of *Erysiphales* identified in the country. Basing on the number of potential host plants, we have to conclude that the number of *Erysiphales* species should be much larger here. Thus, further studies on these fungi are required in Turkey.

The aim of this paper is to provide a comprehensive review of the *Erysiphales* and their host range in Turkey. It also facilitates access to the scattered Turkish literature on the topic that may not be readily available to the student of Turkish microfungi.

2. Materials and methods

The checklist was based on published literature on *Erysiphales* in Turkey and own data. The current names of fungi are given according Braun and Cook (2012). Names of host plants and families are given according to <http://www.theplantlist.org/>

Genera, species and subspecies of powdery mildews are listed alphabetically followed by the host plant names, host family and related references. Anamorphic genera were added after teleomorphic taxa. In addition, species names used in the original publications are also shown after the relevant references when these differ from current name of fungi.

3. Results

A total of 143 species of *Erysiphales* were identified and reported from Turkey. The listed fungi belong to ten teleomorphic genera, viz. *Arthrocladiella* (1 species), *Blumeria* (1 species), *Erysiphe* (46 species), *Golovinomyces* (23 species), *Leveillula* (22 species), *Neoerysiphe* (2 species), *Phyllactinia* (18 species), *Pleochaeta* (1 species), *Podosphaera* (20 species), *Sawadaea* (1 species), and four anamorphic genera, i.e. *Euoidium* (1 species), *Fibroidium* (1 species), *Oidiopsis* (3 species), and *Pseudoidium* (3 species).

The recorded *Erysiphales* were found on 674 host species that belong to 322 genera and 72 families.

List of Taxa

Ascomycota Caval.-Sm.

Pezizomycotina O.E. Erikss. & Winka

Leotiomycetes O.E. Erikss. & Winka

Erysiphales H. Gwynne-Vaughan

Erysiphaceae Tul. & C. Tul.

Arthrocladiella Vassilkov

A. mougeotii (Lév.) Vassilkov, Bot. Mater. Otd. Sporov. Rast. Bot. Inst. Komarova Akad. Nauk SSSR 16: 112 (1963).

Lycium barbarum L. (*Solanaceae*) (Oran, 1967; Amano, 1986 as *Microsphaera mougeotii* (Lév.) Sacc.). *Lycium chinense* Mill. (Uçar and Öner, 1977; Amano, 1986 as *M. mougeotii*). *Lycium halimifolium* Mill. (Karel, 1958; Karaca, 1961; Göbelez, 1962; Oran, 1967; Uçar and Öner, 1977; Amano, 1986 as *M. mougeotii*). *Lycium vulgare* Dunal (Oran, 1967 as *M. mougeotii*). *Lycium* sp. (Karaca, 1961; Oran, 1967; Amano, 1986 as *M. mougeotii*; Öner et al., 1974 as *Erysiphe polygona* DC.).

E. berberidis DC., Fl. franç., edn 3 (Paris) 2: 275 (1805).

Berberis aquifolium Pursh (*Berberidaceae*) (Amano, 1986; Severoğlu and Özyiğit, 2012 as *Microsphaera berberidis* (DC.) Lév.). *Berberis crataegina* DC. (Göbelez, 1962; Oran, 1967; Baydar, 1975; Amano, 1986; Severoğlu and Özyiğit, 2012 as *M. berberidis*). *Berberis thunbergii* DC. (Severoğlu and Özyiğit, 2012 as *M. berberidis*). *Berberis vulgaris* L. (Amano, 1986 as *M. berberidis*). *Berberis* sp. (Karaca, 1961; Oran, 1967; Selik, 1973; Amano, 1986 as *M. berberidis*).

E. betae (Vaňha) Weltzien, Phytopath. Z. 47: 127 (1963).

Beta intermedia Bunge ex Boiss. (*Amaranthaceae*) (Bremer et al., 1947; Göbelez, 1962; Oran, 1967; Amano, 1986 as *Erysiphe communis* (Wallr.) Schltdl.). *Beta vulgaris* L. (Bremer et al., 1947; Karel, 1958; Karaca, 1961; Göbelez, 1962; Oran, 1967; Baydar, 1975; Amano, 1986 as *E. communis*; Bahçecioğlu and Işıloğlu, 1995; Bahçecioğlu and Yıldız, 2005; Bahçecioğlu et al., 2006). *Beta vulgaris* var. *cruenta* Alef. (Amano, 1986 as *E. communis*). *Ceratocarpus arenarius* L. (*Chenopodiaceae*) (Tamer et al., 1997 as *E. communis*).

E. bremeri U. Braun, Mycotaxon 15: 133 (1982).

Alhagi maurorum Medik. (*Fabaceae*) (Amano, 1986; Bremer et al., 1947; Göbelez, 1962 as *Erysiphe alhagi*).

E. buhrii U. Braun, Česká Mykol. 32(2): 80 (1978).

Dianthus barbatus L. (*Caryophyllaceae*) (Amano, 1986 as *Oidium dianthi* Jacz.). *Dianthus caryophyllus* L. (Oran, 1967 as *Erysiphe polygoni*; Amano, 1986 as *E. communis* (Wallr.) Schltdl. and *O. dianthi*). *Dianthus* sp. (Göbelez, 1962; Oran, 1967 as *E. polygoni*; Amano, 1986 as *E. communis* and *O. dianthi*). *Gypsophila bicolor* (Freyn. & Sint.) Grossh. (*Caryophyllaceae*) (Tamer et al., 1997 as *E. polygoni*). *Gypsophila libanotica* Boiss. (Bahçecioğlu et al., 2006). *Gypsophila paniculata* L. (Amano, 1986). *Silene chaetodonta* Boiss. (*Caryophyllaceae*) (Tamer et al., 1990a as *E. communis*). *Silene chlorifolia* Sm. (Tamer et al., 1990a as *E. communis*). *Silene discolor* Sibth. & Sm. (Bahçecioğlu and Yıldız, 2005; Kırbağ and Kürşat, 2011). *Silene spergulifolia* (Willd.) M.Bieb. (Bahçecioğlu et al., 2006). *Silene* sp. (Amano, 1986).

E. catalpae Simonyan, Mikol. Fitopatol. 18(4): 463 (1984).

Catalpa bignonioides Walter (*Bignoniaceae*) (Braun, 1995).

Notes: This species is mentioned only once for the European part of Turkey in one of monographs by U. Braun (1995), but in the more capital works (Braun, 1987; Braun and Cook, 2012) and in the world list of powdery mildews by K. Amano (1986) *E. catalpae* for the country is not given. Nevertheless, we include this fungus in our checklist as very likely to view in Turkey, because the species was described from the adjacent territory (Armenia), and also occurs in other countries of Europe and Asia, for example, in France, Georgia, Iraq, Italy, Romania, Ukraine etc. (Heluta et al., 2009a; Braun and Cook, 2012).

E. caulicola (Petr.) U. Braun, Mycotaxon 15: 135 (1982).

Astragalus odoratus Lam. (*Fabaceae*) (Bahçecioğlu et al., 2006). *Astragalus* sp. (Bahçecioğlu et al., 2006).

(Amano, 1986 as *E. communis*). *Vicia sativa* L. (Bremer et al., 1947; Karaca, 1961; Göbelez, 1962; Oran, 1967; Amano, 1986 as *E. communis*).
- Notes: Affiliation of *Trifolium* species to the host range of *E. pisi* var. *cruchetiana*, and *Melilotus*, *Sophora* and *Trifolium* to the hosts of *E. pisi* var. *pisi* seems to us very doubtful. However, the final decision on the taxonomic place of these records may be made after the additional collection and examination of relevant specimens.

E. ulmi Castagne, Cat. pl. Marseille: 492 (1845).

Ulmus glabra Huds. (*Ulmaceae*) (Bremer et al., 1947; Karel, 1958; Karaca, 1961; Göbelez, 1962 as *Erysiphe clandestina* Biv.; Oran, 1967; Amano, 1986 as *Uncinula clandestina* (Biv.) J. Schröt.). *Ulmus minor* Mill. (Sert et al., 2006 as *U. clandestina*).

Notes: On the hosts belonging to *Ulmus* L., Braun and Cook (2012) give two variations of *E. ulmi*, var. *ulmi* and var. *ulmi-foliaceae* (Dzhaf.) U. Braun, which are different in the number of spores in the ascus. The last of these was described on *U. minor* from Azerbaijan (Caucasus). Geographically, this region is close to Turkey. In addition, in Central and East Asia this host plant is infected by *E. kenjiana* (Homma) U. Braun & S. Takam. Recently, this species was recorded in Europe (Russia, Ukraine) (Heluta et al., 2009b). It is possible that both of the fungi, *E. ulmi* var. *ulmi-foliaceae* and *E. kenjiana*, can occur in Turkey.

Phyllactinia sp.

Alnus glutinosa (L.) Gaertn. (*Betulaceae*) (Erper et al., 2012 as *Phyllactinia guttata*).

Notes: There are known two *Phyllactinia* species on alders, viz. *P. alni* Y.N. Yu & S.J. Han and *P. alnicola* U. Braun. The first of them is recorded in Asia (China, India, Iran, Israel, Japan, Korea, Far East of Russia) on Asian *Alnus* species. The second is known only in North America and Europe on other alders including *A. glutinosa* (Braun and Cook, 2012). In our case, the fungus is recorded in Asia but on a host plant that has mainly European distribution. Therefore, this record may belong to both *P. alni* and *P. alnicola*. This problem can only be solved after the collection of additional samples.

Pleochaeta Sacc. & Speg.

P. shiraiana (Henn.) Kimbr. & Korf, Mycologia 55(5): 624 (1963)

P. tridactyla (Wallr.) de Bary, *Abh. Senckenb. Naturforsch. Ges.* 7: 408 (1870).

Prunus armeniaca L. (*Rosaceae*) (Karel, 1958; Karaca, 1961; Göbelez, 1962; Oran, 1967; Öner and Ekmekçi, 1974; Amano, 1986). *Prunus avium* Mill. (*Rosaceae*) (Amano, 1986). *Prunus cerasus* L. (Oran, 1967; Öner and Ekmekçi, 1974; Amano, 1986). *Prunus incana* (Pall.) Batsch (Bahçecioğlu and Yıldız, 2005). *Prunus mahaleb* L. (Amano, 1986). *Prunus* sp. (Bahçecioğlu et al., 2006).

Notes: In Georgia, one of the mentioned host species, viz. *Prunus incana*, can be infected by *Podosphaera salatai* V.P. Heluta, U. Braun & Gvrit. (Heluta et al., 2005; Braun and Cook, 2012). Thus, the identity of this Turkish collection is still unclear.

P. xanthii (Castagne) U. Braun & Shishkoff, in Braun & Takamatsu, *Schlechtendalia* 4: 31 (2000)

Arctium lappa L. (*Asteraceae*) (Oran, 1967; Amano, 1986; Hüseyin and Selçuk, 2000 as *Sphaerotheca fuliginea*). *Bidens tripartita* L. (*Asteraceae*) (Hüseyin and Selçuk, 2000; Bahçecioğlu and Yıldız, 2005 as *S. fusca*). *Calendula officinalis* L. (*Asteraceae*) (Göbelez, 1962; Oran, 1967; Amano, 1986 as *S. fuliginea*; Kavak, 2011). *Citrullus lanatus* (Thunb.) Matsum. & Nakai (*Cucurbitaceae*) (Hüseyin and Selçuk, 2000 as *S. cucurbitae* (Jacq.) Z.Y. Zhao). *Cosmos* sp. (*Asteraceae*) (Karakaya, 1998c as *S. fusca*). *Cucumis melo* (*Cucurbitaceae*) (Bremer et al., 1947; Karel, 1958; Göbelez, 1962; Oran, 1967; Amano, 1986 as *S. fuliginea*; Hüseyin and Selçuk, 2000 as *S. cucurbitae*; Kırbağ and Turan, 2005 as *S. fuliginea*). *Cucumis sativus* L. (Karel, 1958; Oran, 1967; Amano, 1986 as *S. fuliginea*; Hüseyin and Selçuk, 2000 as *S. cucurbitae*; Kırbağ and Turan, 2005; Kırbağ and Kürşat, 2011 as *S. fuliginea*). *Cucurbita pepo* L. (*Cucurbitaceae*) (Bremer et al., 1947; Karel, 1958; Göbelez, 1962; Oran, 1967; Amano, 1986 as *S. fuliginea*; Hüseyin and Selçuk, 2000 as *S. cucurbitae*; Kırbağ and Kürşat, 2011 as *S. fuliginea*). *Lagenaria siceraria* (Molina) Standl. (*Cucurbitaceae*) (Bremer et al., 1947; Oran, 1967; Amano, 1986 as *S. fuliginea*). *Physalis alkekengi* L. (*Solanaceae*) (Oran, 1967;

Amano, 1986 as *S. fuliginea*). *Vigna unguiculata* (L.) Walp. (*Fabaceae*) (Soylu et al., 2004 as *Podosphaera phaseoli* (Z.Y. Zhao) U. Braun & S. Takam.). *Xanthium spinosum* L. (*Asteraceae*) (Bremer et al., 1947; Oran, 1967; Amano, 1986 as *S. fuliginea*; Kabaktepe and Bahçecioğlu, 2006 as *S. fusca*). *Xanthium strumarium* L. (Bremer et al., 1947; Karaca, 1961; Oran, 1967; Uçar and Öner, 1977; Amano, 1986; Hüseyin and Selçuk, 2000 as *S. fuliginea*; Bahçecioğlu and Yıldız, 2005; Bahçecioğlu et al., 2006; Kırbağ and Kürşat, 2011 as *S. fusca*). *Zinnia elegans* Jacq. (*Asteraceae*) (Kavak, 2011).

Podosphaera sp.

Viola sp. (*Violaceae*) (Severoğlu and Özyiğit, 2012 as *Sphaerotheca macularis*).

Notes: *S. macularis* (current name *Podosphaera macularis* (Wallr.) U. Braun & S. Takam.) is confined only to the hosts belonging to *Humulus* L. (*Cannabaceae*). Braun and Cook (2012) mentioned on *Viola P. violae* (U. Braun) U. Braun & S. Takam. but this species is known only from North America. Nevertheless, some *Podosphaera* species can infect *Viola* in Europe and Asia. For example, Voytyuk et al. (2008) illustrated a powdery mildew on *V. canadensis* (cult.) conidia of which had fibrosin bodies. Therefore, the identity of these collections is still unclear and we prefer to interpret this fungus as *Podosphaera* sp.

Sawadaea Miyabe

S. bicornis (Wallr.) Homma, J. Coll. agric., Hokkaido imp. univ. 38: 371 (1937).

Acer campestre L. (Amano, 1986). *Acer negundo* L. (Oran, 1967; Amano, 1986; Severoğlu and Özyiğit, 2012 as *Uncinula aceris* (DC.) Sacc.). *Acer pseudoplatanus* L. (Oran, 1967 as *U. aceris*; Amano, 1986; Severoğlu and Özyiğit, 2012 as *Erysiphe platani* (Howe) U. Braun & S. Takam.).

Anamorphic species

Euoidium Y.S. Paul & J.N. Kapoor

E. lycopersici (Cooke & Masee) U. Braun & R.T.A. Cook, Taxonomic Manual of the *Erysiphales* (Powdery Mildews), CBS Biodiversity Series, 11: 335 (2012).

Lycopersicon esculentum Mill. (*Solanaceae*) (Amano, 1986 as *Erysiphe communis*; Severoğlu and Özyiğit, 2012 as *Oidium lycopersici* Cooke & Masee).

Fibroidium (R.T.A. Cook, A.J. Inman & C. Billings) R.T.A. Cook & U. Braun

F. abelmoschi (Thüm.) U. Braun & R.T.A. Cook, Taxonomic Manual of the *Erysiphales* (Powdery Mildews), CBS Biodiversity Series, 11: 167 (2012).

Abelmoschus esculentus (L.) Moench (Amano, 1986; Braun, 1995 as *Oidium abelmoschi* Thüm.).

Oidiopsis Scalia, Agric. Calabro-Siculo 27: 396 (1902)

O. andrachnes Golovin ex U. Braun, Taxonomic Manual of the *Erysiphales* (Powdery Mildews), CBS Biodiversity Series, 11: 211 (2012).

Andrachne telephioides L. (*Phyllanthaceae*) (Bremer et al., 1947; Karaca, 1961; Oran, 1967; Amano, 1986; Tamer et al., 1992; Bahçecioğlu and Işiloğlu, 1995; Bahçecioğlu and Yıldız, 2001, 2005; Bahçecioğlu et al., 2006 as *Leveillula taurica*; Braun and Cook, 2012).

O. balsaminae Rajd., Mycopath. Mycol. appl. 28: 150 (1966)

Impatiens balsamina L. (*Balsaminaceae*) (Amano, 1986 as *Leveillula taurica*; Braun and Cook, 2012).

O. cisti (Jaap) Golovin, Acta Inst. bot. Komarov. Acad. Sci., Pl. Crypt, ser. 2 10: 298 (1956)

Cistus creticus L. (*Cistaceae*) (Öner et al., 1974; Amano, 1986 as *Leveillula taurica*; Braun and Cook, 2012).

Pseudoidium Y.S. Paul & J.N. Kapoor

P. ceratoniae (Comes) U. Braun & R.T.A. Cook, CBS Biodiversity Series, 11: 601 (2012).

Cerantonia siliqua L. (*Fabaceae*) (Hüseyin et al., 2009 as *Oidium ceratoniae* Comes).

P. hortensiae (Jørst.) U. Braun & R.T.A. Cook, CBS Biodiversity Series, 11: 606 (2012).

Hydrangea macrophylla (Thunb.) Ser. (*Hydrangeaceae*) (Braun, 1995 as *Oidium hortensiae* Jørst.).

P. lauracearum (Graniti & U. Braun) U. Braun & R.T.A. Cook, CBS Biodiversity Series, 11: 609 (2012).

Laurus nobilis L. (*Lauraceae*) (Severoğlu and Özyiğit, 2012 as *Oidium lauracearum* Graniti & U. Braun).

Excluded and doubtful species of powdery mildews and their hosts

Erysiphe cichoracearum DC.

Ranunculus asiaticus L. (*Ranunculaceae*) (Amano, 1986).

Notes: This species (current name *Golovinomyces cichoracearum*) infects the *Asteraceae*. Plants belonging to *Ranunculus* are common hosts of *Erysiphe aquilegiae*. The identity of this collection is still unclear.

Erysiphe communis (Wallr.) Schldtl.

Chrozophora tinctoria (L.) A. Juss. (*Euphorbiaceae*) (Bremer et al., 1947; Oran, 1967; Amano, 1986). *Hydrangea macrophylla* (Thunb.) Ser. (*Hydrangeaceae*) (Amano, 1986). *Mentha* sp. (*Lamiaceae*) (Amano, 1986).

Notes: No species belonging to *Erysiphe* sect. *Erysiphe* are known on *Chrozophora*. *Hydrangea* representatives can be infected by *E. poeltii* U. Braun but this fungus is only North American powdery mildew. *Erysiphe hommae* U. Braun is known on *Mentha* only from Eastern Asia. Therefore, records of *E. poeltii* and *E. hommae* in Turkey are unlikely. Thus, the identity of these collections is still unclear.

Erysiphe geraniacearum U. Braun & Simonyan

Geranium pratense L. (*Geraniaceae*) (Braun, 1995).

Notes: This species is mentioned for the European part of Turkey in one of the monographs by U. Braun (1995), but in the more capital works (Braun, 1987; Braun and Cook, 2012) *E. geraniacearum* for the country is not given.

E. lagerstroemiae E. West

Lagerstroemia indica L. (*Lythraceae*) (Severoğlu and Özyiğit, 2012).

Notes: Status of this species was discussed by Braun and Cook (2012). As result *E. lagerstroemiae* is excluded from the world list of powdery mildews. Perhaps only *E. australiana* infected *L. indica* in Turkey.

E. polygoni DC.

Alnus glutinosa (L.) Gaertn. (*Betulaceae*) (Severoğlu and Özyiğit, 2012). *Hydrangea* sp. (Severoğlu and Özyiğit, 2012). *Calendula* sp. (*Asteraceae*) (Severoğlu and Özyiğit, 2012). *Liriodendron tulipifera* L. (*Magnoliaceae*) (Severoğlu and Özyiğit, 2012). *Mentha spicata* L. (*Lamiaceae*) (Tamer et al., 1990b). *Mentha* sp. (Öner and Ekmekçi, 1974).

Notes: This species parasitises only hosts belonging to *Polygonaceae*. The identity of these collections is still unclear.

E. trinae Harkn.

Quercus hartwissiana Steven (*Fagaceae*) (Severoğlu and Özyiğit).

Notes: This unusual species is known only from North America, USA (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely.

Microsphaera abbreviata Peck

Quercus sp. (Bahçecioğlu et al., 2006).

Notes: This species (current name *Erysiphe abbreviata* (Peck) U. Braun & S. Takam.) is known only from North America, USA (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely.

M. alni (Wallr.) G. Winter

Catalpa bignonioides Walter (*Bignoniaceae*) (Severoğlu and Özyiğit, 2012). *Cornus* sp. (*Cornaceae*) (Severoğlu and Özyiğit, 2012). *Corylus avellana* L. (*Betulaceae*) (Severoğlu and Özyiğit, 2012). *Gleditsia triacanthos* L. (*Fabaceae*) (Severoğlu and Özyiğit, 2012). *Quercus* sp. (*Fagaceae*) (Severoğlu and Özyiğit, 2012). *Spiraea* sp. (*Rosaceae*) (Severoğlu and Özyiğit, 2012). *Tilia platyphyllos* Scop. (*Malvaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Erysiphe penicillata* (Wallr.) Schldl.) is confined only to the hosts belonging to *Alnus* (*Betulaceae*) (Braun and Cook, 2012). All of the plants listed here excluding *Spiraea*, can be infected by representatives of *Erysiphe* sect. *Microsphaera*. However, these powdery mildews are known in East Asia or North America, but not in Central or Western Asia. Therefore, to determine the taxonomic affiliation for mentioned records is not given possible. Perhaps, in all cases hasmothecia of powdery mildews were brought on these plants from other substrates. The identity of these collections is still unclear.

M. diffusa Cooke & Peck

Robinia pseudoacacia L. (*Fabaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Erysiphe diffusa* (Cooke & Peck) U. Braun & S. Takam.) is the North American fungus, its finds on *Robinia* in Asia are questionable (Braun and Cook, 2012). In Europe and Asia this host plant can be infected by *Erysiphe palczewskii* (Jacz.) U. Braun & S. Takam., *E. pseudoacaciae* (P.D. Marczenko) U. Braun & S. Takam., and *E. robiniae* Grev. (Braun and Cook, 2012). Obviously, the record belongs to one of these species.

Oidium spp.

Adonis vernalis L. (*Ranunculaceae*) (Amano, 1986). *Bellis perennis* L. (*Asteraceae*) (Amano, 1986). *Calamintha* sp. (*Lamiaceae*) (Amano, 1986). *Morina persica* L. (*Caprifoliaceae*) (Amano, 1986). *Malva* sp. (*Malvaceae*) (Amano, 1986). *Phyla nodiflora* (L.) Greene (*Verbenaceae*) (Amano, 1986 as *Oidium lippiae* Thüm.). *Primula* sp. (*Primulaceae*) (Amano, 1986). *Muscari* sp. (*Hyacinthaceae*) (Amano, 1986). *Sesamum indicum* L. (*Pedaliaceae*) (Amano, 1986).

Notes: The identity of these collections is still unclear. Powdery mildew on *Malva* belongs probably to *Erysiphe malvae* V.P. Heluta.

Phyllactinia corylea (Pers.) P. Karst.

Liriodendron tulipifera L. (*Magnoliaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species is a synonym to *Phyllactinia guttata* which parasitises hosts belonging to *Corylus*. *Liriodendron* species are infected by *P. liriodendri* U. Braun but only in North America (Braun and Cook, 2012). The identity of this collection is still unclear.

P. guttata (Wallr.) Lévl.

Actinidia deliciosa (A. Chev.) C.F. Liang & A.R. Ferguson (*Actinidiaceae*) (Erper et al., 2012).

Notes: Three *Phyllactinia* species are known on *Actinidia* (Braun and Cook, 2012). All of them are distributed only in East Asia. Thus, the record of this fungus in Turkey is unlikely. Perhaps, hasmothecia were brought on this plant from other substrate.

P. paulowniae Y.N. Yu & S.J. Han, in Yu & Lai

Paulownia sp. (*Paulowniaceae*) (Severoğlu and Özyiğit, 2012).

Notes: Two powdery mildews can infect hosts belonging to *Paulownia*. One of them, *Phyllactinia paulowniae*, was described from China and is known only from the type collection. Other species, *P. salmonii* S. Blumer, also is known only from East Asia (China, Japan, and Korea). Thus, the record of this fungus in Turkey is unlikely. Perhaps, hasmothecia were brought on this plant from other substrate.

P. suffulta (Rebent.) Sacc.

Buxus sp. (*Buxaceae*) (Amano, 1986). *Juglans* sp. (*Juglandaceae*) (Amano, 1986). *Rhamnus* sp. (*Rhamnaceae*) (Amano, 1986). *Rubus vulgaris* Weihe & Nees (*Rosaceae*) (Oran, 1967; Amano, 1986).

Notes: The identity of these collections is still unclear. Perhaps, hasmothecia were brought on these plants from other substrates.

Podosphaera oxyacanthae (DC.) de Bary

Spiraea × *vanhouttei* (Briot) Carrière (Severoğlu and Özyiğit).

Notes: In Europe, hosts belonging to *Spiraea* often are infected by a powdery mildew fungus only in anamorphic state. Obviously, the same fungus found in Turkey. The identity of such collections is still unclear (Braun and Cook, 2012).

Sphaerotheca humuli (DC.) Burri

Ranunculus constantinopolitanus (DC.) d'Urv. (*Ranunculaceae*) (Severoğlu and Özyiğit, 2012). *Sambucus ebulus* L. (*Caprifoliaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Podosphaera macularis* (Wallr.) U. Braun & S. Takam.) is confined only to the hosts belonging to *Humulus* L. (*Cannabaceae*). In addition, no species of the genus *Podosphaera* were mentioned on *Ranunculus* and *Sambucus* in the monograph by Braun and Cook (2012). Therefore, the identity of these collections is still unclear.

Uncinula circinata Cooke & Peck

Acer negundo L. (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Takamatsuella circinata* (Cooke & Peck) U. Braun & A. Shi) is known only from North America, USA (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely.

U. clintonii Peck

Tilia platyphyllos Scop. (*Malvaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Erysiphe clintonii* (Peck) U. Braun & S. Takam.) is known only from North America (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely.

U. geniculata W.R. Gerard

Morus alba L. (*Moraceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Erysiphe geniculata* (W.R. Gerard) U. Braun & S. Takam.) is known only from North America (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely.

U. parvula Cooke & Peck

Celtis australis L. (*Cannabaceae*) (Severoğlu and Özyiğit, 2012).

Notes: This species (current name *Erysiphe parvula* (Cooke & Peck) U. Braun & S. Takam.) is known only from North America (Farr et al., 1989; Braun and Cook, 2012). It was not found in any regions of Asia or Europe. Therefore, records of this fungus in Turkey are unlikely. We assume that this record corresponds to other fungus, *E. celtidis* (Schwarzman & Kusnezowa) U. Braun & S. Takam., which is found on *C. australis* in neighboring countries.
